AI-Assisted Skin Analysis Report

User : Meet

Prediction : Acne

Confidence : 99.59%

Description :

Acne is a common skin condition that can occur when hair follicles become clogged with oil and dead skin cells.

Medicine / Treatment Information :

Treatment depends on the type and severity of acne. Products containing ingredients such as benzoyl peroxide or salicylic acid may be used in some cases. Consult a healthcare professional for appropriate treatment.

General Care / Home Remedy :

Gently clean the affected area, avoid squeezing pimples, and use non-comedogenic skincare products.

Doctor Advice :

Consult a dermatologist if acne is severe, painful, persistent, or causing scarring.

Combined AI Analysis

Final Assessment :

Inconclusive

Image & Symptoms Match :

INCONCLUSIVE

Combined Confidence :

Inconclusive

AI Assessment :

The image analysis predicted Acne with a high confidence of 99.59%. However, because symptom data was unavailable, a comparative evaluation between visual findings and reported symptoms could not be performed. Consequently, the overall finding is inconclusive.

Recommended Care :

Keep the affected skin clean using a mild, non-comedogenic cleanser. Avoid picking, squeezing, or aggressively rubbing the area to prevent further irritation or scarring.

Medicine Information :

General over-the-counter topical treatments for acne-like lesions include benzoyl peroxide or salicylic acid. However, do not begin self-medication without a proper medical evaluation.

Doctor Advice :

Please consult a dermatologist or healthcare provider for a clinical evaluation and an accurate, personalized treatment plan.
