AI-Assisted Skin Analysis Report

User : Meet

## Image Analysis

Prediction : Inconclusive

Confidence : Low%

## Reported Symptoms / Problem

red, itchy patches on my hands

## Combined AI Analysis

Final Assessment : Inconclusive

Image & Symptoms Match : MISMATCH

Combined Confidence : Low

## AI Assessment

There is a clear mismatch between the image model prediction (Acne) and the user's reported symptoms (hand eczema / contact dermatitis). Acne primarily affects the face, chest, and back with symptoms like pimples, blackheads, and oily skin. In contrast, the user reports red, itchy patches specifically on the hands triggered by frequent washing and harsh soaps. Due to conflicting body location and symptom presentation, the overall assessment is inconclusive.

## Recommended Care

Maintain gentle skin care for the hands. Wash with lukewarm water and mild, fragrance-free cleansers. Apply a thick moisturizer or ointment (like petroleum jelly) immediately after washing, and wear protective gloves when washing dishes or handling household chemicals.

## Combined Medicine Information

Over-the-counter 1% hydrocortisone cream can be applied sparingly to the hands for short-term relief of mild itching and inflammation. Avoid using acne treatments on irritated hand skin, as they can cause severe drying and worsening of dermatitis.

## Combined Doctor Advice

Because the automated prediction conflicts with your reported symptoms and location, a reliable diagnosis cannot be made automatically. Please consult a dermatologist or qualified healthcare provider for a thorough examination and appropriate diagnosis.

## Disease Information

No information is available for this AI prediction.

## Medicine / Treatment Information

Please consult a qualified healthcare professional.

## General Care / Home Remedy

Avoid self-treatment based only on an AI prediction.

## Doctor Advice

Consult a dermatologist or qualified healthcare professional.
