Image Analysis

Prediction : Inconclusive

Confidence : 20%%

Reported Symptoms / Problem

red itchy patches on hands

Combined AI Analysis

Final Assessment : Inconclusive

Image & Symptoms Match : MISMATCH

Combined Confidence : Low

AI Assessment

There is a mismatch between the image model prediction and the user's reported symptoms. The image model predicted Acne, a condition usually found on the face, chest, or back characterized by pimples and clogged pores. Conversely, the user reported symptoms corresponding to hand eczema or contact dermatitis on the hands, characterized by dry, red, and itchy patches. Because of these distinct differences in body location and symptom presentation, the overall assessment is inconclusive.

Recommended Care

Focus on gentle, skin-barrier protection. Wash affected areas with lukewarm water and mild, fragrance-free cleansers. Apply a thick moisturizing cream or ointment frequently, particularly after washing. Avoid contact with harsh chemicals, detergents, and known skin irritants, and wear protective gloves during handwashing or cleaning activities.

Combined Medicine Information

Medication cannot be specifically prescribed due to the conflicting findings. Avoid using harsh acne treatments (such as salicylic acid or benzoyl peroxide) on dry, inflamed hand skin, as these can exacerbate irritation. Speak with a healthcare professional before applying over-the-counter hydrocortisone creams.

Combined Doctor Advice

Please schedule an appointment with a dermatologist or licensed healthcare provider for an in-person physical evaluation, accurate diagnosis, and targeted treatment plan.

Disease Information

No information is available for this AI prediction.

Medicine / Treatment Information

Please consult a qualified healthcare professional.

General Care / Home Remedy

Avoid self-treatment based only on an AI prediction.

Doctor Advice

Consult a dermatologist or qualified healthcare professional.
